

# Cell Culture Technician

## Gaithersburg, MD

### Job Description

- Responsible for the adaptation of transferred information for Phase I through Phase III processes from Development (Cell culture and Purification) to Clinical Manufacturing. Involved in the creation of production documentation, evaluation of process fit to facility and schedule, analysis of production data, identifying trends and researching causes for variations in production processes. Works closely with other groups (Development, QC, QA, Engineering, Materials Management, Validation) and acts as facilitator to initiate change

### Principal Duties

- Understands the operational principles of production equipment including bioreactors, centrifuges, filtration devices, and chromatography equipment
- Monitors manufacturing data, develops spreadsheets and methods for trending data that may illuminate subtle issues in the manufacturing process
- Authors Master Production Records (MPR's), Standard Operating Procedures (SOP's) and Solution Preparation Records (SPR's) as needed to accurately reflect manufacturing processes as dictated by development
- Creates Bill of Materials (BOM's) and Master specifications. Works closely with Materials Management to ensure that materials are available for production
- Evaluates operating procedures for accuracy and efficient operation and suggests improvements and optimizations to manufacturing methods
- Has good interpersonal skills, is attentive and approachable. Discusses problems with colleagues and senior personnel
- Maintains a professional and productive relationship with supervisor and co-workers

### Job Requirements

- Requires a Bachelors degree in a scientific discipline with a minimum of 0 to 2 years related experience with demonstrated working knowledge of scientific and production related principles
- Academic laboratory experience is acceptable
- Cell Culture experience in a laboratory is preferred
- Ability to learn new techniques within a timely fashion
- Training is provided
